

Salesforce Code to mass cancel all existing scheduled jobs

Posted on [August 12, 2014](#) by [patlatus](#)

Many times after sandbox refresh I have to cancel all scheduled jobs to be able to edit many classes.

However, I can use my code from my package for canceling and scheduling schedulable job or button from my package if it is installed on current sandbox.

There is here the code

```
1      List<CronTrigger> ctList = [ Select Id From CronTrigger c where c.CronJobDetail.JobType = '7' ];
2      for ( CronTrigger ct: ctList) {
3          System.abortJob( ct.Id );
4      }
```

or even shorter version

```
1      for ( CronTrigger ct: [ Select Id From CronTrigger c where c.CronJobDetail.JobType = '7' ] ) {
2          System.abortJob( ct.Id );
3      }
```
