

Lightning Page could not be loaded because it includes too many formula fields with complex formulas, or too many custom fields OR Cannot load a page layout with more than 254 fields in lightning interface..!!

This is quite annoying to have this error while opening a record detail page in salesforce lightning.  
As of now this is available in known issues of Salesforce lightning but does not have a great fix but to reduce the number of lookup and formula fields from the layout.

- Workaround:
- Page layouts should be reduced in the following areas:
- 1) Reduce Lookup fields to below 35
  - 2) Reduce Formula fields to below 30-40
  - 3) Consider reducing overall fields below 300 (less impactful)
