# (Manager Groups)

ON **JANUARY 8, 2020** BY **AYUSHI TIWARI**

HELLO Salesforce Thinkers, In our previous blog we learned about Salesforce Data Security and Access – Part 13 (Field Level Security). In this blog we are going to learn about **"Manager Groups"**.

Salesforce Data Security and Access - Part 14

We can enable **'Manager Groups'** sharing option to share records with the '**Manager**' of user defined on the '**User**' object.

We can use **manager groups** to share records with our management chain, instead of all managers in the same role based on the role hierarchy.

With **manager groups**, we can share records via manual sharing, sharing rules, and Apex managed sharing.

Type of manager groups a user have:

- Managers Group
- Manager Subordinates Group

Manager Group includes a user's direct and indirect managers.

Manager Subordinates Group includes a user and the user's direct and indirect reports.

**How to find out who is a user's manager?**

For this navigate to,

Setup >> enter Users in the Quick Find box >> then select Users.

Click a **user's** name.

The **Manager field** on the **user detail page** displays the **user's manager**.

How to enable users to share records with the manager groups?

Setup >> enter Sharing Settings in the Quick Find box >> select Sharing Settings.
