Simultaneous execution of workflow rules and workflow actions

Knowledge Article Number   000338437

Description   When multiple workflow rules with similar criteria trigger simultaneously for the same object,the order of execution on both workflow rules and workflow actions cannot be set.

Resolution   **Note:** Salesforce does not support or guarantee the order of execution of **workflow rules**.

The order in which individual actions and types of actions are executed is not guaranteed. However, field update actions are executed first, followed by other actions.

Please do not rely on any logic based on order of execution that you may obtain from debug logs, for example, as we do not guarantee that the execution of **individual workflows** would be the same the next time the workflow and actions are triggered.
